

Don't Let your Hands Give Away Your Age!

Skin ages the same way all over the body. Hands are subject to the same loss of fat, collagen, and elastin. So hands can benefit from some of the same aesthetic treatments that make the face look more youthful.

The injection of a filler such as Juvederm adds volume and helps retain moisture, giving hands a softer, more youthful appearance.

There is minimal discomfort with the injection procedure. It does require multiple syringes (an average of two per hand). Take advantage of our multiple syringe discounts for summer rejuvenation.

Frequently, hands, like most of the skin below the face, are forgotten when applying sunscreen. This neglect exacerbates the extreme aging of the hands. A combination of sunscreen, filler, and Fraxel can restore the hands so they don't give away your age.

We are pleased to offer a summer rejuvenation package for hands: Our multiple syringe discount (first syringe at full price, a second with \$75 off, a third with \$100 off), 30% off Fraxel treatment for the hands and 15% off sunscreen (and any other skincare products).

For the first 20 patients who call to schedule a complete hand rejuvenation package, we are excited to offer a free syringe of Juvederm with the purchase of three syringes. All syringes must be used at the same appointment. This offer is valid only with the purchase of a complete hand rejuvenation package (Juvederm, Fraxel, and sunscreen).
